

Step 7:

make a copy of the line layer. (this is important)

select the copy layer.

Use "Script-Fu"->"Alpha To Logo"->"Glowing Hot"

Effect Size 20 pixel, black background.

Remove the new background layer and move the line layer to to top.

Hide the layer with the cross and save as a png image.

Save it as gimpt native, too. you might need that again.

To have the gauge show something, a pointer is needed.

This pointer will be created by a C program. The howto for this program will be in the C-Programming section soon.
